Redesigned

At any given moment, tons of transactions are made. But on every transaction, no part of the cost is invested in the future of our world. Safecare is here to change that.

Safecare was created to make the world a better place by implementing a unique tokenomics as well as a very specific Ecosystem and goal ; to make the world a better place.

To do this, Safecare unites the world of charity with that of cryptocurrency using the Binance Smart Chain but we aim bigger, we aim to unite charity with that of all possible investments.

Safecare offers benefits for everyone, among other things, we offer investors a way to give while winning, financially.

Ecosystem

Safecare is a progressive deflationary DeFi token designed to last over time by making the world a better place. Safecare operates on the Binance Smart Chain (BSC).

Binance Smart Chain (BSC) is a blockchain network built for running smart contracts, like Safecare Token.

A token contract is a smart contract that contains a map of account addresses and their balances. Tokens can be used for investment purposes, to store value, or to make purchases.

A progressive delationay token model is where tokens are removed from the market over time. To remove them, we have a burn on each transaction.

Decentralized finance (DeFi) refers to financial services using smart contracts. They do not need intermediaries, They use the Blockchain.

Token burning is to remove a quantity of token from the circulating supply. The tokens are transferred into a burn address. Safecare Burn Address :
`0x00`

Charity wallet, on each transaction there is a 4% fee reserved for the charity wallet which will be redistributed every month. Safecare Charity Wallet :
`0xf34abd641c87a8c35b234afb92cf4639f098ae9d`

Safecare _____ Coming soon...

Decentralized

Safecare has a total Supply of 1 Quadrillion. During the launch, 45% of The supply was burned to activate the deflationary tokenomics. The tokens did not go into a traditional burn wallet, they rather went into the contract that was the owner of Safecare. But two days later, ownership was renounced, which means that the tokens are no longer in circulation, so we can say that they Burn.

On each transaction, a 10% fee applies which is separated as follows :

4% Goes to the Charity Wallet who is managed by the community

3% Returns to all holders as a reward

3% Burns to increase the price of the tokens

Safecare is **completely decentralized**. Ownership was renounced shortly after the launch. This ensures that all development, marketing, management, etc. is made by members of the community. The community has 100% of the power.

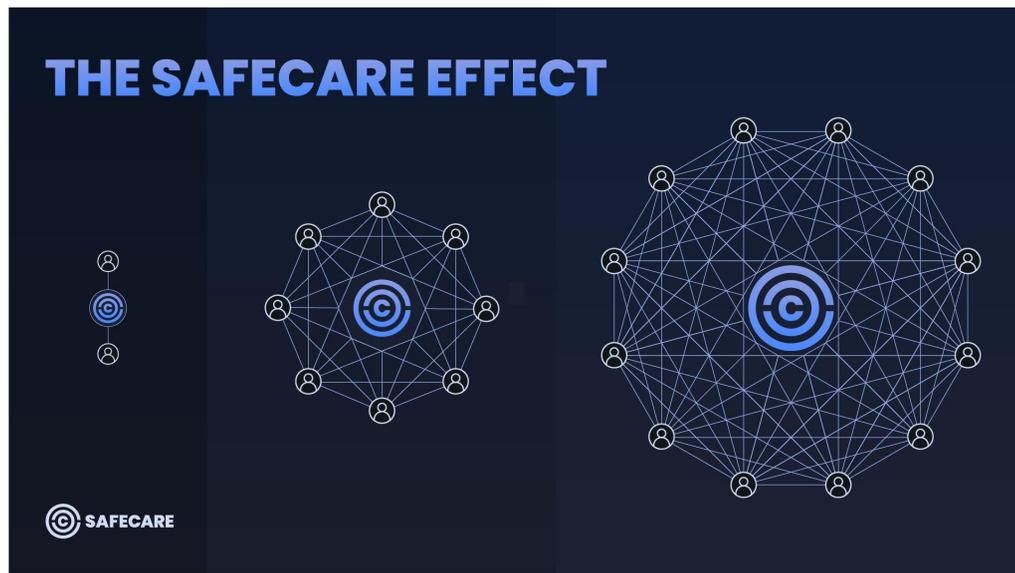

All marketing, reserve and team tokens are 100% locked.
The Liquidity pool is also 100% locked.

The Safecare effect

The Safecare effect is an economic effect that describes the ecosystem where additional users add value to the network.

When the Safecare effect is present,

each new user adds value to the ecosystem by activating the tokenomics and so by entering the network. This, in turn, incentivizes new users to join the network, adding more value to it, and so on

The more people who enter the network, the more tokenomics is engaged and therefore the system becomes more efficient.

The holders make more links between them and receive more reflections at the same time as more tokens are burned and the more the charity wallet fills up and therefore, the impact of Safecare on the world grows. This is the safecare effect.

The Safecare Network is improving as it grows.

Charity

Safecare is linked with charity.

4% of the transaction fees going into the charity wallet are accumulated to be redistributed every month.

Here is the process:

1. The community nominates charities that have a positive and constructive impact on the world
2. The community votes on Safecare's social networks for the charity they prefer
3. The charity that receives the most votes will receive the fees collected in the charity wallet during the last month.
4. We start the process again by making further improvements.

What happens if the charity does not accept UCARE or cryptocurrencies?

Firstly, our goal is also to make UCARE tokens a common payment method for all charities. Until this happens we will have to show our involvement as well as provide real support to the world of charity to make itself known. If the charity does not accept cryptocurrencies we will

make sure to exchange the tokens for Fiat money, we hate to say that word but that's life, Fiat money is still there. We will do this by making sure that the price of safecare is not affected, we also plan to sell the tokens in the charity wallet to the community for a lower price.

Helping

Mission & Future

Safecare mission

Safecare mission is to become major players in the world that will always be present to put an end to conflicts and problems in the world. Safecare is and always will be 100% community driven. In addition, investors will always be rewarded and we make sure that the holders will always be in a profitable situation because it is the essence of Safecare, to make money while helping the world.

To make the world a better place, Safecare makes sure that all of the reflections in the Charity Wallet are given to Charities chosen and approved by the community where everyone is on an equal basis. All this, while ensuring that its investors are rewarded and are happy to be profitable Holders.

Safecare Future

We will put the official roadmap here soon, we can immediately tell you that the Safecare ecosystem will expand very soon. Safecare App, Safecare Tracker, Safecare Charity and more are things that will come.

For the Road Map from May to July please go here.
